Art Unit: 3738

Claims 59-62, 64, 66-68, 83, and 84 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention. The original disclosure fails to disclose (especially for the elected configuration corresponding to Figure 9) positioning a passive device such that, at least **during systole**, a portion of the device contacts and passively alters a geometry of heart structure **other than** leaflets, chordae, papillary muscles, and an annulus associated with the *in situ* mitral valve so as to draw together leaflets of the *in situ* valve to promote closure of the *in situ* valve. In fact, one would expect that the alteration of the "other" heart structure occurs **during diastole only**, since otherwise the passive device would interfere with the normal post-systolic dilation of the heart cavities. With regard to the Applicant's tension member 225, U.S. patent application Serial No. 08/933,456 is incorporated in the present disclosure by reference (parent US 6,332,893 B1: column 4, lines 10-15), but the examiner likewise does not find any support in said incorporated application for altering the geometry of *other* heart structure *during systole*.

Because of the procedure outlined in M.P.E.P. 2163.06 for interpreting the claims, it is noted that prior art may be applicable under 35 U.S.C. 102 or 35 U.S.C. 103(a) once the aforementioned problem under 35 U.S.C. 112, first paragraph, is corrected. For example, although the present invention is said to improve the functioning of the mitral valve during systole, the same is likely true of certain prior art devices (e.g., US 5,800,528) which passively reduce ventricular dilatation.

Art Unit: 3738

The narrowing of the "other" heart structure so as to exclude the annulus, chordae, and papillary muscles associated with the *in situ* mitral valve necessitated the new grounds of rejection. Therefore:

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
